Water Pollution

How Does Water Pollution Occur?

Water pollution is the pollution that occurs as a result of the wastes that people throw into the water.

How Can it be Reduced?

We can solve water pollution by not throwing waste into the water and informing people.

Water is human life
Water is fun
Don't pollute the water
Good luck water
Mune Daria

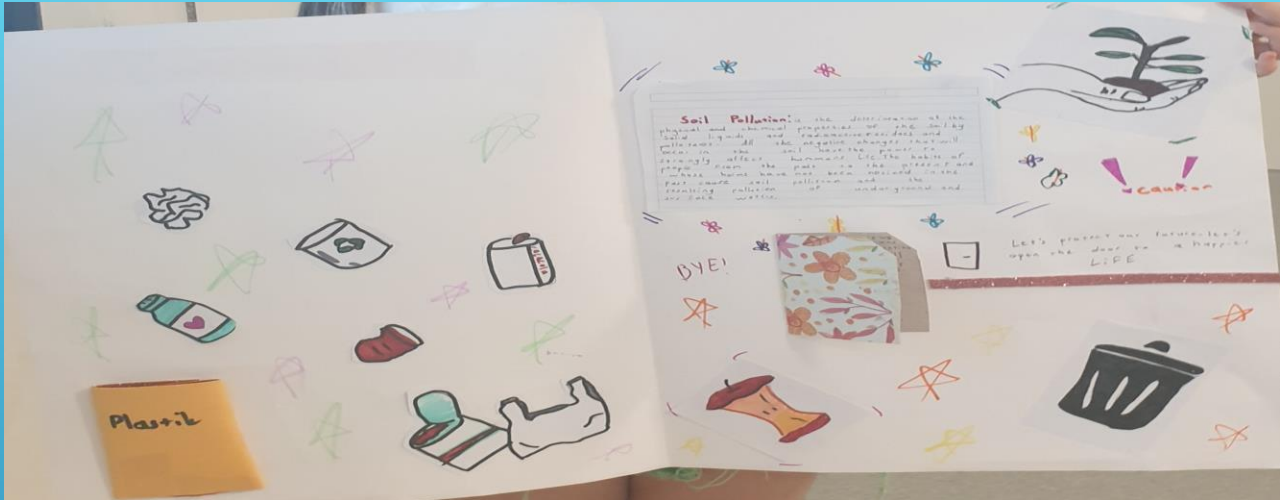

What Should We Do?

We should throw less waste into the water, protect the water and raise awareness of our world.

What Should We Not Do?

We should not throw garbage and chemicals into the water.

Soil Pollution is the deterioration of the physical and chemical properties of the soil by both natural and man-made processes. It is a global problem that affects the health of people from the household to the global level. There have been many cases of soil pollution in the past caused by pollution of underground and surface water.

Let's protect our future by taking care of the soil.

Soil Pollution

Bad way

If we spill fruit juice on the soil, we will damage the soil.

If we throw something smelly on the ground, we will damage the soil.

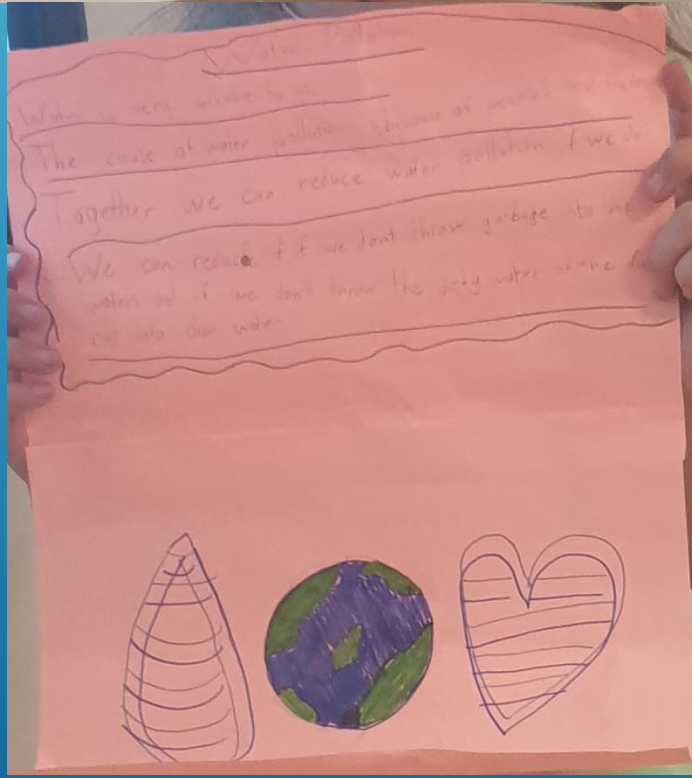

Good way

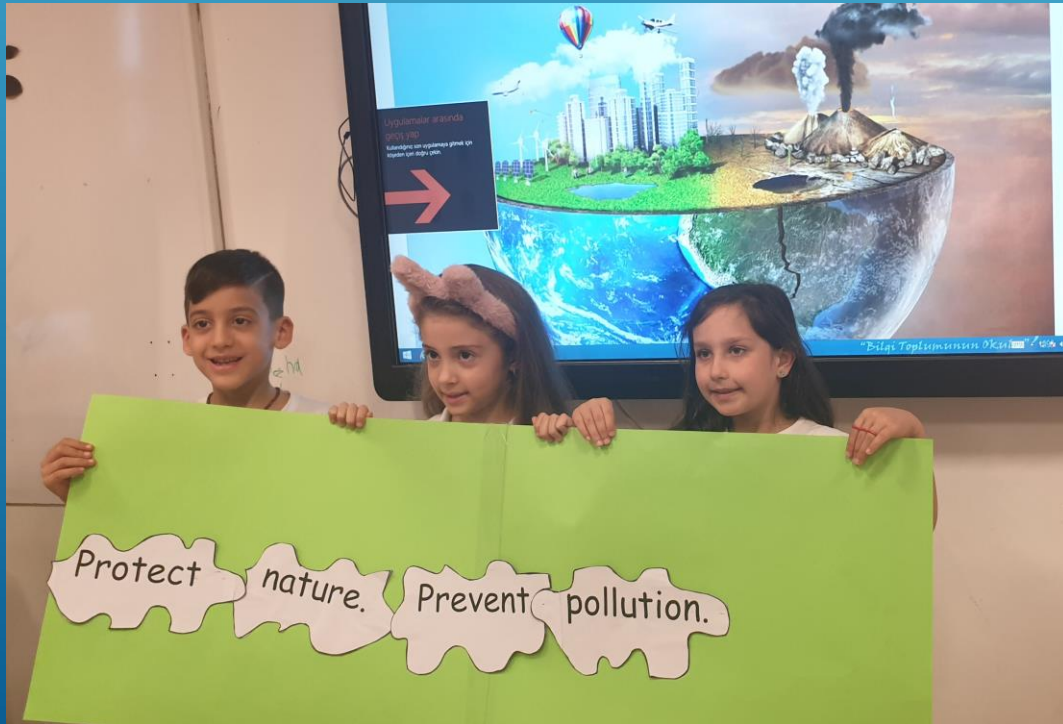

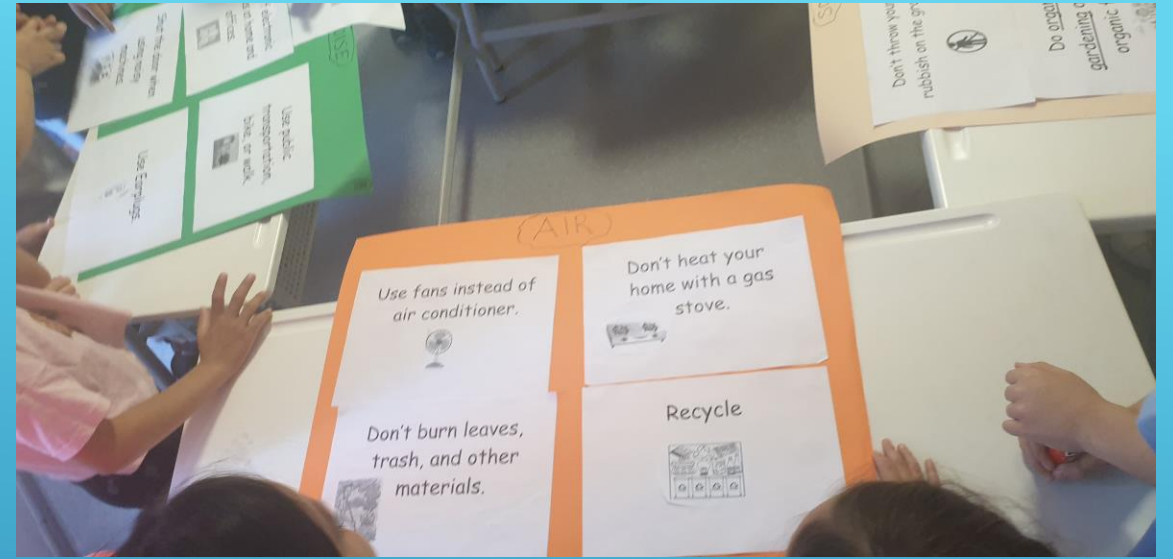

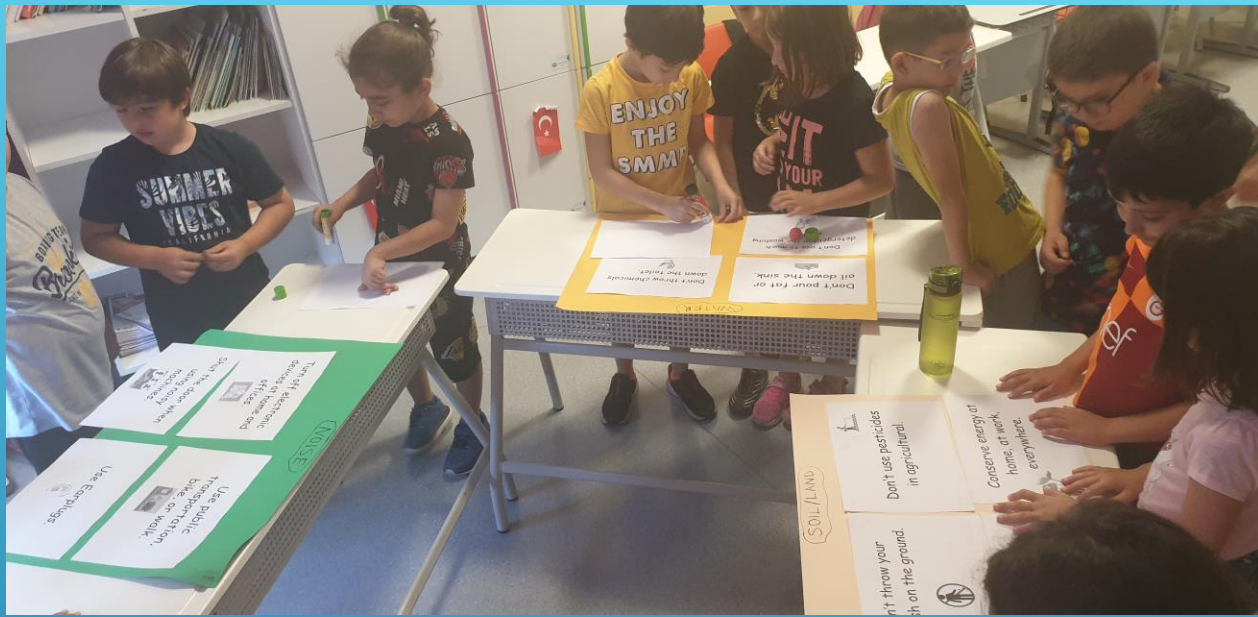

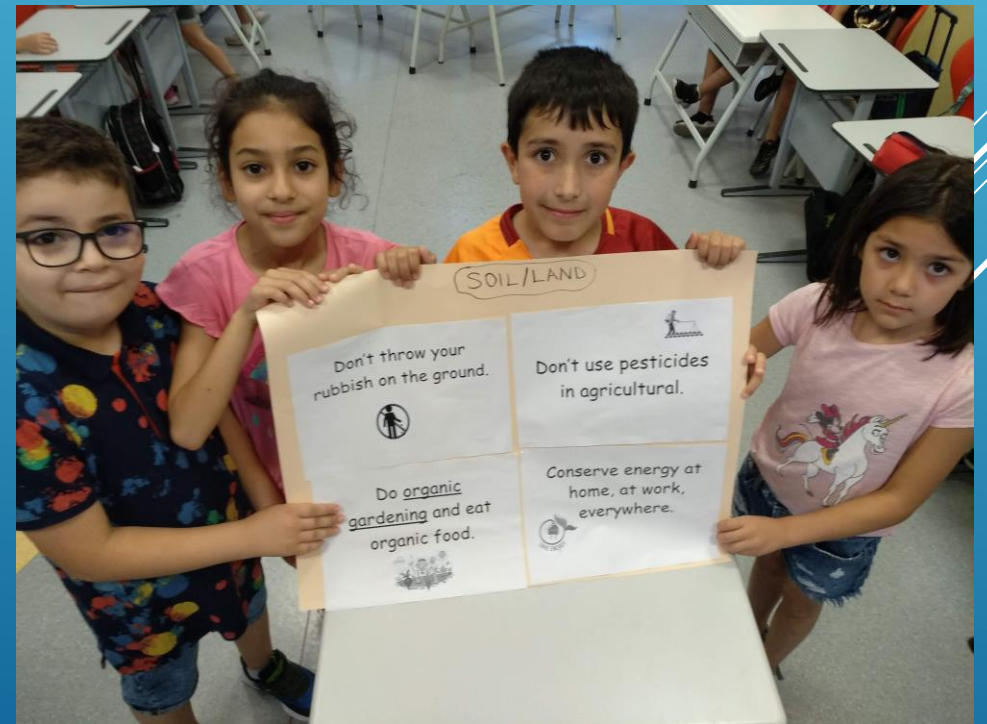

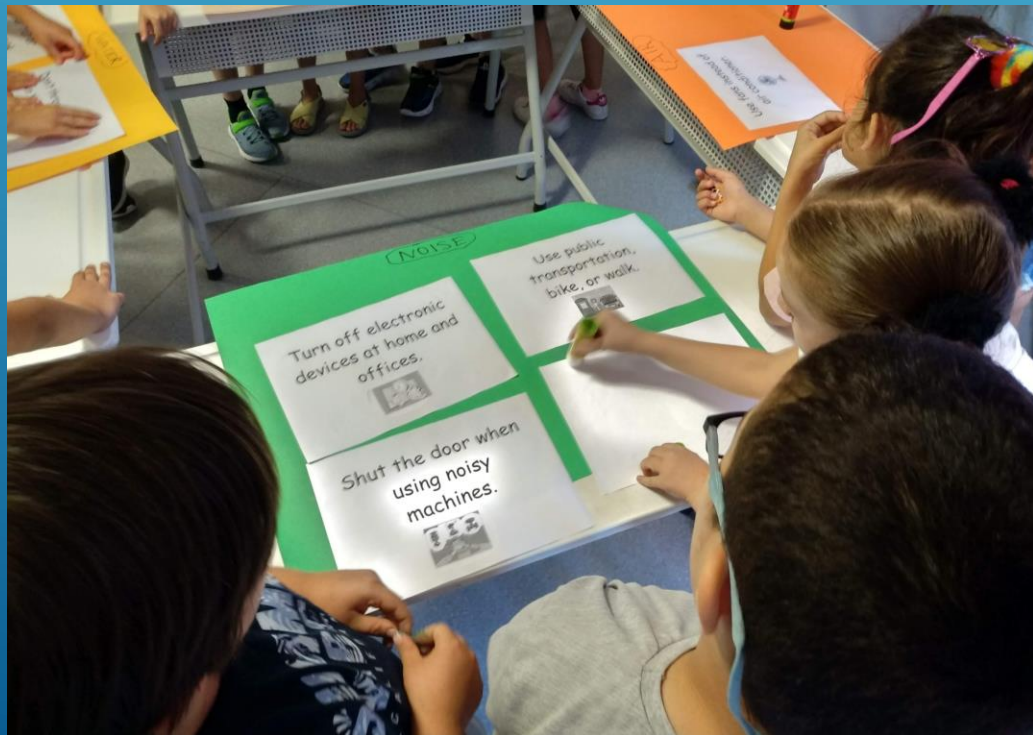

If we plant seeds in the garden, we will not harm the soil.

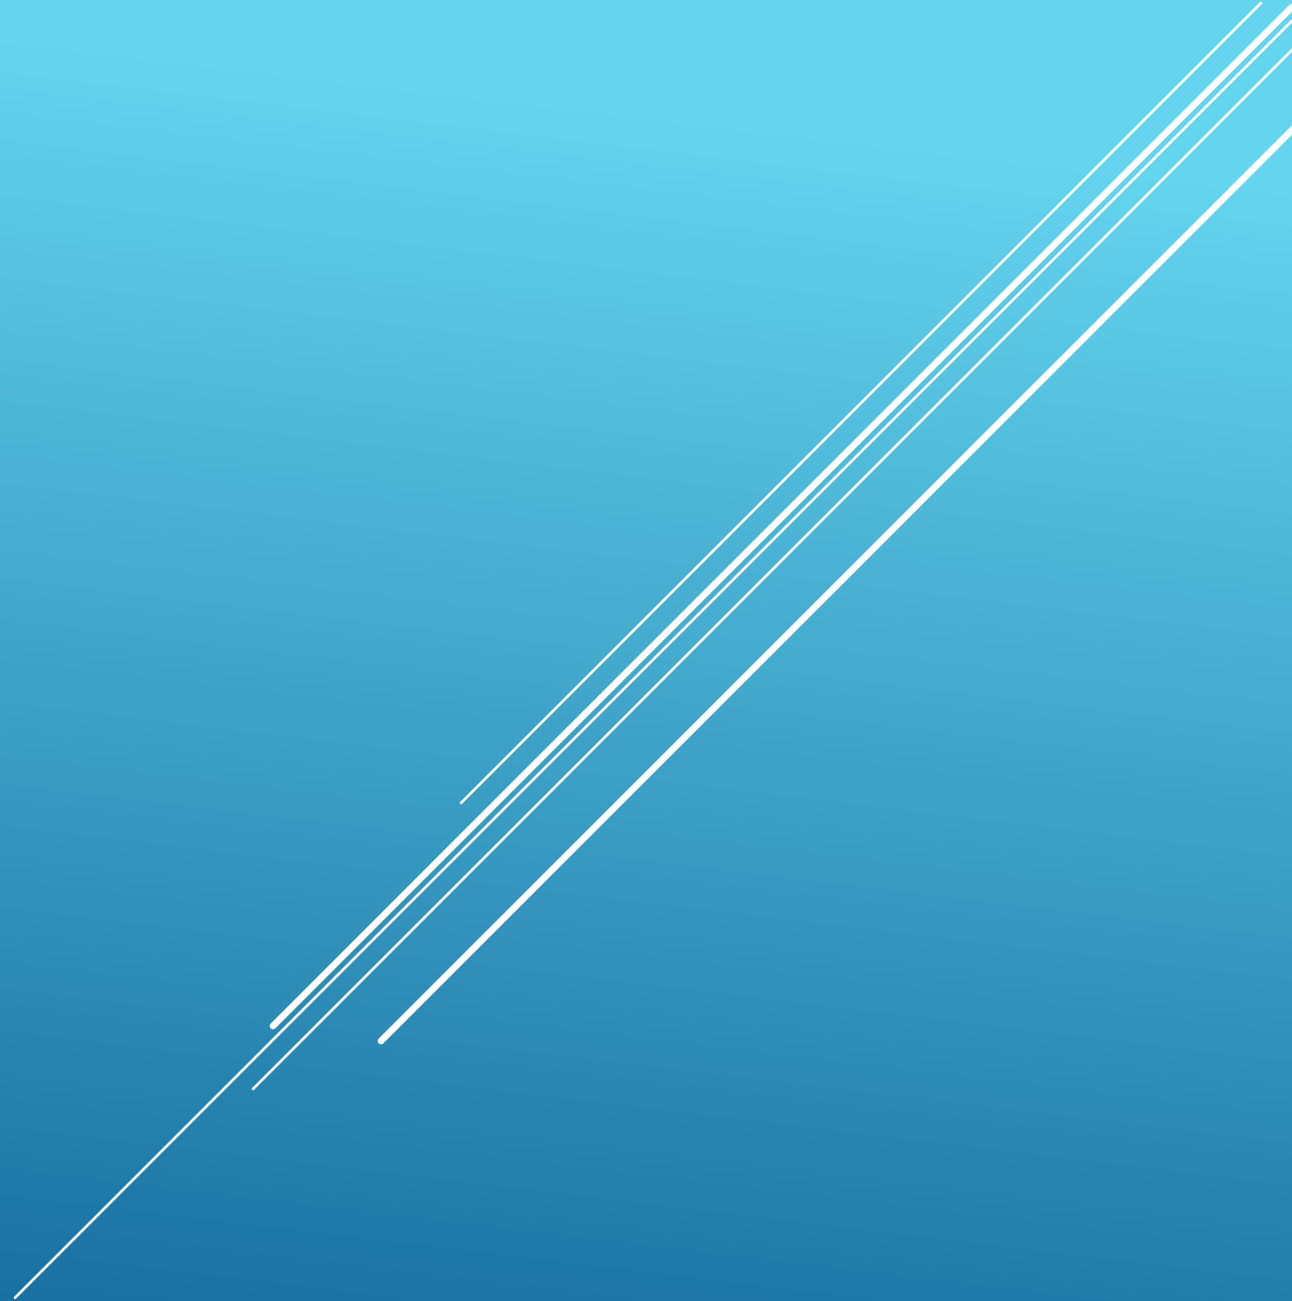

If we pour water on the soil, we will not harm the soil.
